

OPEN-SOURCE BASEBALL INTELLIGENCE

NineLens

Baseball intelligence brought into focus.

A connected workspace for player evaluation, team analysis, game intelligence, and better baseball decisions.

Version 1.0.0

github.com/timothyf/ninelens

NineLens: The Project

NineLens started with a practical question: how can baseball research keep evidence, context, and decisions connected?

Version 1.0.0 is the first public release of that idea.

The screenshot displays the NineLens website, which is a platform for baseball intelligence. The header includes the NineLens logo (a stylized '9' inside a baseball), the tagline 'BASEBALL INTELLIGENCE', a search bar, and navigation links: Home, Schedule, Standings, Stat Explorer, Compare, and Teams. A user profile for 'Timothy Fisher' is visible in the top right.

The main content area features a large hero section with the text 'Baseball intelligence, brought into focus.' and a sub-headline: 'Track today's slate, scan the league's top performers, and move directly into the player and team analysis behind the numbers.' Below this are two buttons: 'Explore league stats' and 'Browse all teams'. A call-to-action box on the right encourages users to 'START WITH A NAME' and 'Find any player from the search bar above', with a note about jumping from season totals into career history, rolling trends, pitch-level analysis, and contextual benchmarks.

The 'TODAY'S SLATE' section, titled 'GAMES AROUND THE LEAGUE', shows 15 games. Each game entry includes the time, venue, and the two teams playing. The games are as follows:

Time	Venue	Team 1	Team 2
6:40 PM	Tropicana Field	Athletics	Tampa Bay Rays
6:40 PM	PNC Park	Milwaukee Brewers	Pittsburgh Pirates
6:40 PM	Progressive Field	Chicago White Sox	Cleveland Guardians
6:40 PM	Great American Ball Park	Los Angeles Dodgers	Cincinnati Reds
6:45 PM	Nationals Park	Philadelphia Phillies	Washington Nationals
7:07 PM	Rogers Centre	Detroit Tigers	Toronto Blue Jays
7:10 PM	Citi Field	Baltimore Orioles	New York Mets
7:40 PM	Target Field	New York Yankees	Minnesota Twins
7:40 PM	Wrigley Field	Atlanta Braves	San Francisco Giants
8:05 PM	Globe Life Field	Boston Red Sox	Kansas City Royals

Baseball questions rarely live in one place.

Research starts with a question. The work is connecting the evidence that answers it.

THE PROBLEM

A player’s performance, a team’s needs, and the context of a game are connected. Most workflows make you assemble that connection manually.

NineLens brings the research path into one place: league context, player detail, game evidence, team performance, and staff workflow.

One workspace, four ways to move the work forward.

NineLens connects the information people use to research, evaluate, explain, and act.

Find the signal

Search players, teams, schedules, standings, and league leaders.

Understand the context

Compare performance with benchmarks, roles, splits, and recent form.

Study the evidence

Move from a game summary into box scores, pitches, batted balls, and situations.

Carry the decision

Save analyses, write notes, build watchlists, and evaluate acquisition fit.

Player profiles turn a stat line into a point of view.

A unified profile connects biography, career production, benchmarks, trends, history, and notes.

EXAMPLE: RILEY GREENE

Career production on top. League context underneath. The same profile carries into trends, similar players, and staff notes.

Game intelligence follows the game as it unfolded.

NineLens makes the path from final score to decision-relevant evidence easy to follow.

ONE GAME, SEVERAL LENSES

Overview, box score, pitching analysis, batted ball, situational results, and play-by-play live together on the Game Summary page.

[illegible]

Team profiles connect performance to the next decision.

Team context combines production, rank, recent form, roster, schedule, and decision-support tools.

FROM DASHBOARD TO ACTION

Team Performance Dashboard shows where a club is strong, where it is vulnerable, and how those patterns change over time.

The work stays connected after the analysis.

NineLens is designed for the part of baseball work that happens after the first answer.

DECISION SUPPORT

Compare players side by side, adjust stat weights, save the view, and keep the reasoning with the analysis.

The same workflow extends to watchlists, organizational need profiles, acquisition candidates, lineup scenarios, opponent reports, notes, tags, and audit history.

Research

Evaluate

Explain

Revisit

A data workflow built for repeatable research.

NineLens combines source data, calculated analytics, and a searchable interface in one system.

UNDER THE HOOD

Source data enters through repeatable, idempotent workflows.

- 01 **MLB + Statcast** Schedules, games, rosters, profiles, season stats, and pitches.
- 02 **PostgreSQL** Canonical records, historical relationships, and raw source responses.
- 03 **Derived analytics** Daily summaries, benchmarks, percentiles, trends, and coverage checks.
- 04 **Decision surface** Rails API, Vue application, saved views, notes, and staff workflows.

NineLens brings the slate, schedule, standings, league leaders, and Stat Explorer into the same research path.

02

Follow performance trends, compare against benchmarks, and inspect pitch-level behavior when the question demands more detail.

03

Turn analysis into a repeatable workflow

NineLens connects analysis to the work that follows:

- save players and teams to watchlists
- plan lineups and matchups
- prepare opponent reports
- keep data and derived analytics current

From research to baseball decisions

Watchlists • Player comparison • Opponent preparation

The image displays three screenshots of the NineLens baseball analytics interface, illustrating its features for research and decision-making.

Left Screenshot: WATCHLISTS & ACQUISITION EVALUATIONS

This screen shows a "PLAYERS TO WATCH" section with a "CALCULATED ACQUISITION FIT" metric. Below this, there are sections for "PLAYERS MATCHING THIS NEED" and "SEASON COMPARISON" for a specific player (e.g., J.J. WINTER). The comparison table shows various metrics like OPS, HR, and RBI, with a "CAREER COMPARISON" section at the bottom.

Middle Screenshot: SIDE-BY-SIDE COMPARISON

This screen provides a detailed comparison between two players, TARIK SKIRRAL and PAUL SHERES. It includes a "VIEW & SHARING" section, a "COMPARISON NOTES" section, and a "SEASON COMPARISON" table. The table compares various metrics (e.g., OPS, HR, RBI) for both players across different seasons.

Right Screenshot: DETROIT TIGERS

This screen displays the team page for the Detroit Tigers. It features a "NEXT SERIES" section for the Toronto Blue Jays, a "BRAYTON FOSBER" player profile, and a "MAX SCHIRER" player profile. The page includes various statistics and a "VIEW & SHARING" section.
